

UH-5000 ULTRASONIC HUMIDIFIER

- The perfect humidity in your growing room during all growth stages
- Compact design
- Perfect for CO2 enriched rooms with air conditioning
- Plug & Play
- Comes with a digital hygostat with 5 meter long sensor cable (adjustable 20% - 95% RH)
- Generates 5kg/hour fine mist of 1 ~ 2 micron which quickly dissolves in the air and doesn't precipitate
- Handy 110mm elbow to spread the fog through your room. Easily connect a flexible air duct or T-pieces
- Integrated float valve for automatic water level control

FUNCTIONALITY OF THE UH-5000

The **UH-5000** uses ultrasonic oscillation to generate a very fine water spray (1 ~ 2 micron). This very fine mist floats through the air and does not precipitate. This mist is then transported outside with a built-in fan. The fog will dissolve in the dry ambient air and increase the

humidity in your room. Due to the high fog capacity of 5 liters / hour, the **UH-5000** is suitable for rooms up to 125m². The supplied digital hygrostat gives you the possibility to set and maintain the desired relative humidity (20% - 95% RH).

The **UH-5000** can be easily connected to a flexible air duct or pipe to evenly spread the mist in your room. This ensures that you get the optimum humidity in your entire room.

TECHNICAL DETAILS

Humidifying capacity:	5kg/hour
Diameter of spray outlet:	110mm
Voltage:	230VAC/50Hz
Power:	320W
Waterconnection diameter:	½"
Dimensions:	400x340x310mm (L x W x H)
Weight:	6.8 kg
Water content capacity:	4.3 kg
Warranty:	1 year
